

# Shubham Sharma

Full Stack Developer | Software Engineer | Consultant

Email: sharmashubham6300@gmail.com

Phone: +91 7798141871

Location: Pune

## PROFILE

A disciplined and dynamic team player with professional experience of 4+ years with insightful experience in developing applications as Full Stack Developer Role. Appreciated constantly for performance excellence and contributions to success in industry with strength in delivering successful deliveries.

## SKILLS

- Core Java
- SpringBoot, Spring Data JPA, Spring batch, Spring Security, Microservices, Junit 5
- API testing tool: Postman, Swagger
- SQL, MySQL, Oracle
- Angular, Bootstrap, PrimeNG, Angular material, Html, CSS, JavaScript, TypeScript
- VCS/SCM tool – Git, SVN
- Tools: Vs code, Eclipse, SQL developer, Putty, WinScp
- Teamcity CICD Pipeline
- Knowledge of MS Office
- Exposure of AWS (EC2, S3 bucket, etc)

## CERTIFICATION

- J2EE Cloud Capgemini Training
- JEE Cloud Internship Certificate
- J2EE Cloud Capgemini Bootcamp Training
- Amazon Web Services Practitioner
- Spring Data JPA from Pluralsight
- Spring Security from Udemy

## EDUCATION

- Bachelor of Engineering: Electronics and Telecommunication.
- Smt. Kashibai Navale college of engineering, August 2020

## WORK HISTORY

### Capgemini Information Technology

#### **Full Stack Developer - November 2020 to Current**

- I have worked on multiple applications which were built on Java, Spring Boot, and Angular.
- Currently, I have developed two screens with end to end functionality (Frontend and Backend) and also developed the required Rest API's.
- Done development according to the rules of SonarQube, so that quality of the code is well optimized and good during the development phase itself.
- Conducting sonar scan and unit testing to deliver high quality code.
- Developing code flow and employed coding practices based on accepted standards.
- Supervised a small team of developers by giving them task and conducting code reviews and integrating the changes into the main branch.
- Coordinating with operations team for resolving any problems while deploying changes in Staging and Production environment.

- Understanding requirements from the client during requirement phase gathering about various new features and functionalities.
- Analysing feasible Data Model and creating low level structure of the project.
- Worked on an innovative idea and developed a tool in the new technologies Spring Boot and Angular which helps users to know the interfaces and details of any application. It helped many peoples to know the interfaces of any particular applications and how they are communicating with each other.
- Delivered multiple WOs of many applications with no escalations from customer. And gaining more knowledge about the application to give more efficient deliveries in future requirements.
- Delivered high quality work and met the deadlines consistently.
- Resolved many number of critical issues by providing optimal solutions.
- Performed Regression testing before giving delivery handover to testing team/ UAT.
- Taken care of all the issues during the development phase itself, so that quality of the code and delivery is better and there won't be any defect raised during UAT phase.
- Attempted to give my code with good quality without any issue at the first time.
- Followed the FTR process successfully by taking review comments from FTR team.
- Owning multiple applications and whenever the requirements comes then I have given the estimation and done the development.
- I have used Stream Apis and Lamda expression during the development phase.
- Implemented Executor Service for getting results faster for improving performance and unblock the user for performing another task.
- I have implemented lazy loading on the different parts of an application to allow Angular to load/ render UI components whenever they are required in more optimised way.
- Used PrimeNG framework and its icons for developing some of the components in the application.
- I have developed the common components, so that anyone can reuse it in their respective components. This enables the reusability of the code and prevent by duplicating the code.
- Implemented Spring Batch with scheduler which perform the same task repeatedly after some time of interval.
- Implemented new features Control flow syntax and signals of Angular 17 in the personal application which helps to run code faster and render components in more optimal way.
- I have learnt to make use of Custom Authentication Provider in Spring Security application.
- Used Teamcity for building and deploying the new package of the applications.
- Co-ordinating & supporting the run team for resolving production incidents.
- Attends daily stand-ups with the Manager, Team leads and team members to give updates of development, highlight ongoing issues and discuss action points on daily basis.
- Continuously evaluate and improve processes, tools, and procedures. Identify opportunities as full stack developer.
- Maintained strong education in latest technologies and software for utilizing in various projects.

## PROFESSIONAL HIGHLIGHTS

- Appreciation certificate for being outstanding performer in Q4 FY 23.
- Customer appreciation for successfully handling client activities.
